Colours: Blonde Spruce top. Sides, back and neck in regular shaded mahogany finish. Blonde top with Cherry sides and back and neck.

Complete in carrying case

MODEL CW100

"BIGSBY" PATENTED TRUE VIBRATO

With the Bigsby TRUE VIBRATO it is possible to FLAT the pitch by one-half tone and SHARP the pitch by one-half tone, and the entire set of strings will automatically return to normal pitch.

All Bigsby vibratos are now equipped with a stainless steel, swing away handle which can be swung entirely out of the way for rhythm playing. By pressing on the lever with the heel of the hand the tone is flattened and by lifting up with the little finger the tone is sharpened.

As much variation as desired is possible in the "speed" of the vibrato. Many other effects can be created by the ingenuity of the player such as striking a single note or a full six string chord a half tone below pitch and then coming up to pitch with whatever speed is desired. Bigsby TRUE VIBRATO is supplied complete with a rocker bridge so that strings will not saw the bridge and bridge will not tip on the face of the guitar.

Bigsby TRUE VIBRATO will fit almost any make standard electric guitar.

Two models are available, one for f-hole guitars and one for solid body guitars.

When ordering state which model you require.

No.1 VB F. Hole

No.2 VB Solid Body Guitar with Low Metal Bar Bridge
